

Seamless integration to all your business partners

Focus on your core business! **OpusCapita B2B Integration** service provides an effortless solution for exchanging automated electronic business transactions with suppliers, customers, partners, and authorities. Directly from and to your IT systems – quickly, reliably, and automatically.

Established business relationships in a supply chain rely on many kinds of business transactions: product catalogs, forecasts, orders, delivery confirmations, invoices, waybills, custom declarations – and the list goes on. The data for these transactions resides in and is processed by IT systems. The most efficient way to exchange this information is by electronic messages between organizations' IT systems.

Electronic Data Interchange (EDI) is a global concept for exchanging these electronic transactions. B2B Integration service supports all general and most industry specific national and international standards (e.g. EDIFACT, ANSI, XML).

Business partner integration

By using OpusCapita B2B Integration service you can exchange electronic documents automatically between

yours and your business partners' IT systems. This significantly reduces the associated manual work and human errors in processing the information, and will improve your supply chain procurement, sales, and logistics processes.

OpusCapita acts as a B2B Integration service provider and takes care of two main areas:

- Integrating transaction data between your internal format and the standard or proprietary formats used by your business partners
- Managing reliable electronic business document exchange between the multiple IT systems (e.g. ERPs) and service providers within your business network

By outsourcing the management of electronic document exchange to OpusCapita you also gain cost savings in your in-house IT systems, data networks and associated personnel.

Business partner network

OpusCapita B2B Integration service network covers thousands of companies in Nordics, Baltics and in other parts of Europe. OpusCapita interconnections to other service providers enables business partner connectivity both locally and globally.

Message tracking

OpusCapita provides Track&Trace service where our customers can track their business partner's message flows like message time stamps, lead time, message content and error statuses.

ServiceDesk

All service systems at OpusCapita are under constant monitoring. Also the processing steps of all messages are proactively tracked and supervised 24 hours a day. OpusCapita provides technical support for customers round the clock on every day.

What about your small suppliers?

OpusCapita SupplierWeb complements OpusCapita B2B Integration service by enabling electronic order-delivery-payment cycle with those suppliers, which are otherwise incapable of exchanging electronic business documents. SupplierWeb is a web application that is quick and easy to deploy and to use.

SupplierWeb provides a simple web user interface for receiving, sending and managing electronic orders, confirmations and invoices. From your point of view, these suppliers are as integrated in to your IT system as your large suppliers are.

OpusCapita B2B Integration

- Integrates business partners and enables electronic commerce
- Provides cost savings by automating manual processes in supply chain
- Global connectivity through VAN interconnection
- Supports industry standard messaging formats
